EDUCATION

Government College University, Lahore

B.S. in Computer Science

Lahore, Pakistan

Expected Graduation, June 2026

- o GPA: 3.14/4
- o Related Coursework: Data Structures & Algorithms, Computer Organization & Programming, Machine Learning, Artificial Intelligence, Object-Oriented Programming

EXPERIENCE

My Digital Pixels

Full Stack App Developer

Lahore, Pakistan

Feb 2024 – Feb 2025

- Developed and deployed scalable full-stack applications using React Native, Express.js, MongoDB, and Firebase, enhancing client productivity and delivering user-friendly interfaces across Android and iOS platforms.
- Implemented real-time communication features using Socket.IO, enabling functionalities like instant messaging, live status updates, and real-time notifications to enhance user engagement and app interactivity.
- Optimized backend performance and database queries, integrated third-party APIs, and ensured end-to-end testing and bug fixes, resulting in improved app speed, reliability, and customer satisfaction.

Vanar

Internship

2024

Lahore, Pakistan

Jun 2024 – Aug

- Developed a mobile application using React Native that included features like user login, real-time updates, and clean UI components.
- Worked on integrating third-party libraries and improving app performance, ensuring smooth user experience across different devices.

PROJECTS

Peekaboo – Kids’ Clinic App

Full Stack App Developer

- Created an intuitive mobile interface for appointment booking, doctor profiles, and child health records using React Native.
- Developed notification and reminder features to help parents manage checkups and vaccination schedules.

Rozi – Dubai-Based Property App

Full Stack App Developer

- Developed a property management app with role-based access for brokers, owners, and admin, enabling seamless property listing and communication.
- Built a custom admin panel where leads are matched and sent to brokers based on their selected buildings, streamlining the sales process.

Sthirasthi – SaaS-Based Property Listing App

FrontEnd App Developer

- Built a subscription-based property listing app where brokers pay to unlock and view properties in specific pincodes, using a clean and scalable UI in React Native.
- Implemented a dual-role system where both brokers and owners can manage listings, with owners able to pay for extra pincodes to expand property visibility.
